

It is widely used in electronic, instrumentation, automation, communications, power supply units, student projects, amplifiers, Medical and wellness devices, test and measurement equipment, industrial control, peripheral devices and interfaces, switch boxes.

### 1. Selection of enclosure

1. Size, shape, material, color, etc.
2. The enclosure should be able to protect the components from dust, moisture, and other environmental factors.
3. The enclosure should be able to dissipate heat from the components.

### 2. Mounting of components

1. Drilling, Punching, etc. (to create holes for components).
2. Use of spacers, standoffs, etc. to ensure proper clearance.
3. Use of thermal paste or thermal pads to improve heat dissipation.
4. Use of vibration dampening to protect components from mechanical stress.

### 3. Testing and validation
